

Custom Cataract Surgery Options

Medical Associates Ophthalmology

STANDARD CATARACT PACKAGE

Restoring clarity to your vision.

With standard cataract surgery, your surgeon will remove your clouded lens and replace it with an artificial lens (IOL) that corrects your vision at one visual point, typically distance. You will most likely still need to use prescription eyewear or OTC readers for most daily activities.

**Typically covered
by insurance**

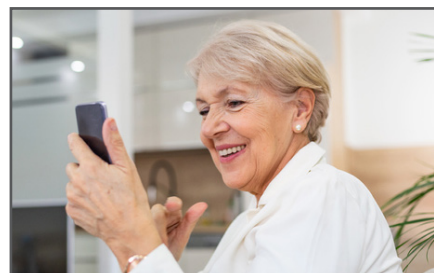

ASTIGMATISM CORRECTING PACKAGE

Corrects astigmatism for sharper, brighter, crisper vision.

Premium cataract surgery utilizes our Callisto digital imaging system which allows your ophthalmologist to measure and surgically correct astigmatism. With astigmatism corrected, you will experience sharper, clearer vision, with less halos in low light situations such as night driving. You will most likely still need to use OTC readers for near and intermediate work.

**Approximately
\$1,500 per eye***

VIVITY PACKAGE

Extended focus for everyday activities.

Our digital lifestyle package utilizes our Callisto digital imaging system and an innovative IOL called Vivity to increase your ability to focus on both objects in the distance and at arm's length. With the Vivity lens implanted, you not only have crisp, sharp distance vision, but you will also be able to more easily read digital devices. You may still need OTC readers.

**Approximately
\$2,500 per eye***

PanOptix PACKAGE

Restore your ability to see at all ranges.

With our freedom package, your surgeon will utilize the Callisto digital imaging system to insert a PanOptix IOL. PanOptix allows you to see clearer in the distance, intermediate, and near vision. With PanOptix lenses, you will be much less dependent on glasses. However, there is a higher chance of experiencing glare in low-light situations.

**Approximately
\$2,500 per eye***
